# Gypsum Boards

Drywall And Plaster Board

**OSMA  
BOARD**

Variety of Solutions

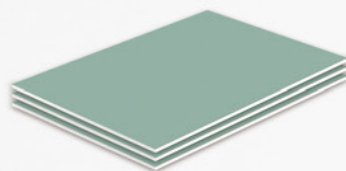

As Osman Group's policy to be always a pioneer in the construction industry in Egypt, we decided to establish Egypt's first local gypsum board factory. Gypsum boards are an alternative solution for cement prefabricated walls and conventional brick walls. It goes in line with development of building materials worldwide.

To meet and exceed international specifications, we use only the finest raw materials. To maintain quality, we use gypsum plaster from our sister company Gipsina (holder of the international Gold star for Quality TQM CC 100 certificate). In addition, we use high-quality additives to enhance the gypsum boards specifications.

**Regular Board**

**Moisture Resistant Board**

**Fire Resistant Board**

A gypsum board panel is made of a paper liner wrapped around an inner core made primarily from gypsum plaster. The gypsum board is formed by sandwiching a core of wet gypsum between two sheets of heavy paper. When the core sets and is dried in a large drying chamber, the board becomes rigid and strong enough to use as a building material.

# Osmaboard

Drywall And Plaster Board

## Primary Uses

- Ceilings
- Partitions
- Shaft Walls
- Wall Linings

## Board Dimension:

**Thickness:** 9.5, 12.5, 15 mm ± 0.5 mm  
**Width** : 1200 mm  
**Length** : 2400, 2800, 3000 mm

**Comply with:** DIN 18180 ES 2002 / 2009 ASTM C1396 / C1396M

## Storage and packing

Store on pallets in a dry warehouse.

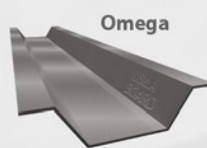

Thickness	Pcs/ Pallet
9.5 mm	80
12.5 mm	60
15 mm	50

## ► Available

### Osmaboard metal sections for drywall installation and suspended ceilings.

Osmaboard metal sections are used in construction of lightweight walls, in furring and cladding as frames for Gypsum boards walls.
